

Claim 34, line 2, change "32" to --42--.

Claim 36, line 2, change "32" to --42--.

Claim 38, line 2, change "32" to --42--.

Claim 40, line 2, change "32" to --42--.

Add claim 42 as follows:

--42. A liquid crystal image display apparatus for displaying gray-scale image data on a liquid crystal panel, the display apparatus comprising:

first storing means for storing current gray-scale image data of a current frame;

5 second storing means for storing previous gray-scale image data of a previous frame;

third storing means having two input ports for receiving and comparing input signals provided by said first and second storing means, said third storing means storing a plurality of gray-scale
10 image data based upon the signals provided by said first and second storing means; and

means for generating a liquid crystal driving signal according to the plurality of gray-scale image data provided from said third storing means;

15 wherein said liquid crystal driving signal generating means includes means for reading out the plurality of gray-scale image data from said third storing means according to said signals provided by said current gray-scale image data supplied from said first storing means and said previous gray-scale image data
20 supplied from said second storing means.
